

Cyclistic Strategic Growth

Data-Driven Marketing Conversion Strategy for Q1 2026

EXECUTIVE COMMITTEE PRESENTATION

Executive Summary

Targeting the high-value conversion potential of leisure riders

The SCR Strategic Framework

ANALYTICAL PILLAR	STRATEGIC ASSESSMENT & INSIGHT
Situation	Cyclistic operates over 5,800 active bike systems in Chicago. Financial modeling indicates that annual members are significantly more profitable than casual day-pass riders.
Complication	In Q1 2026, casual users accounted for 25.7% of trips but kept bikes out 41.6% longer than members. These riders lack long-term loyalty and represent uncaptured membership margins.
Resolution	Deploy a weekend-specific "Warrior" member tier, localized hotspot push messaging, and automated "savings summaries" to convert leisure riders during peak moments.

Behavioral Deep Dive

Uncovering structural differences in ride length and volume

| The Weekend Warrior Effect

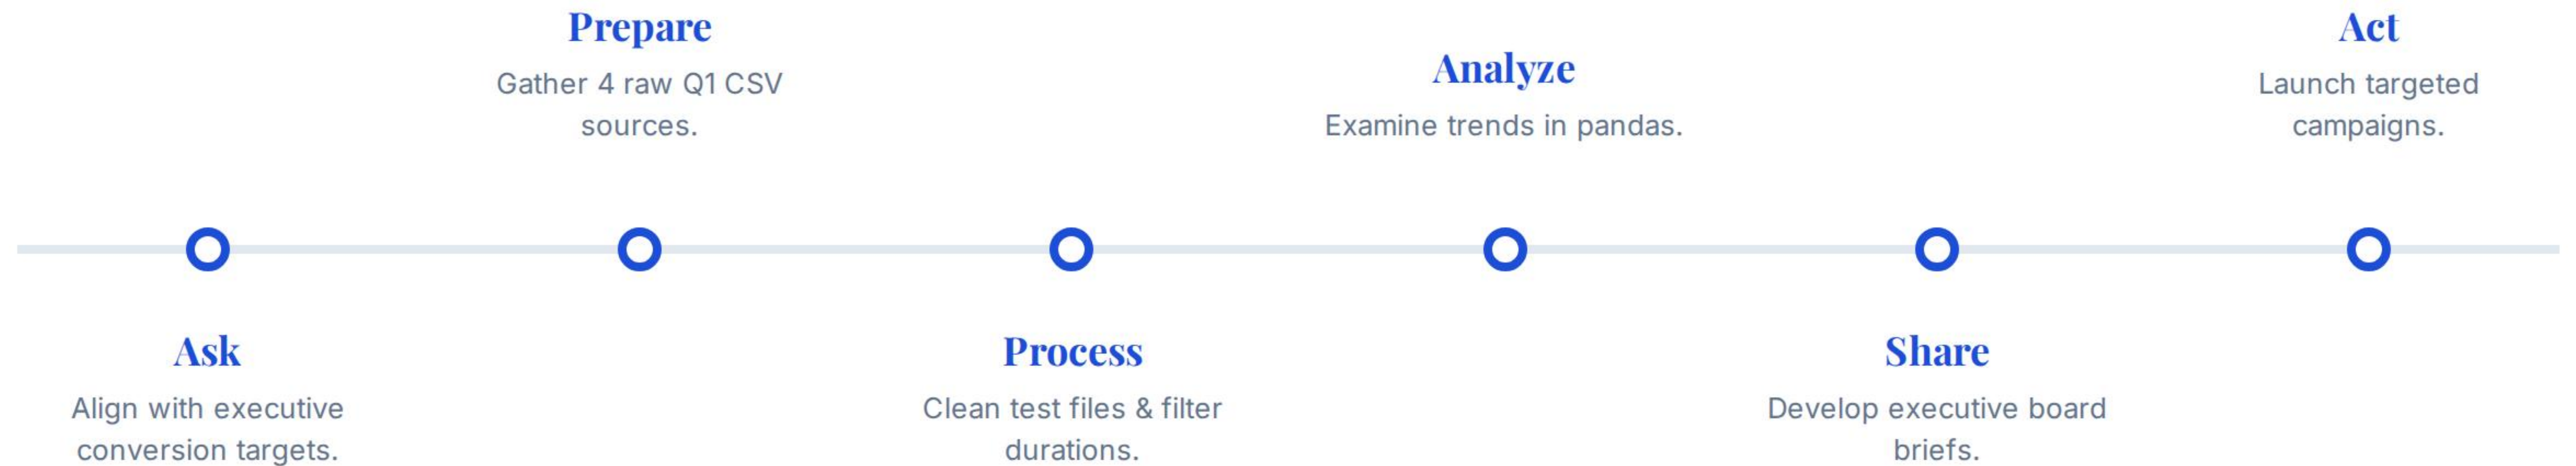

Leisure vs. Utility Habits

Casual riders behave as leisure-focused "Weekend Warriors." Saturday is their peak day with 47,900 rides, followed closely by Sunday with 40,902 rides.

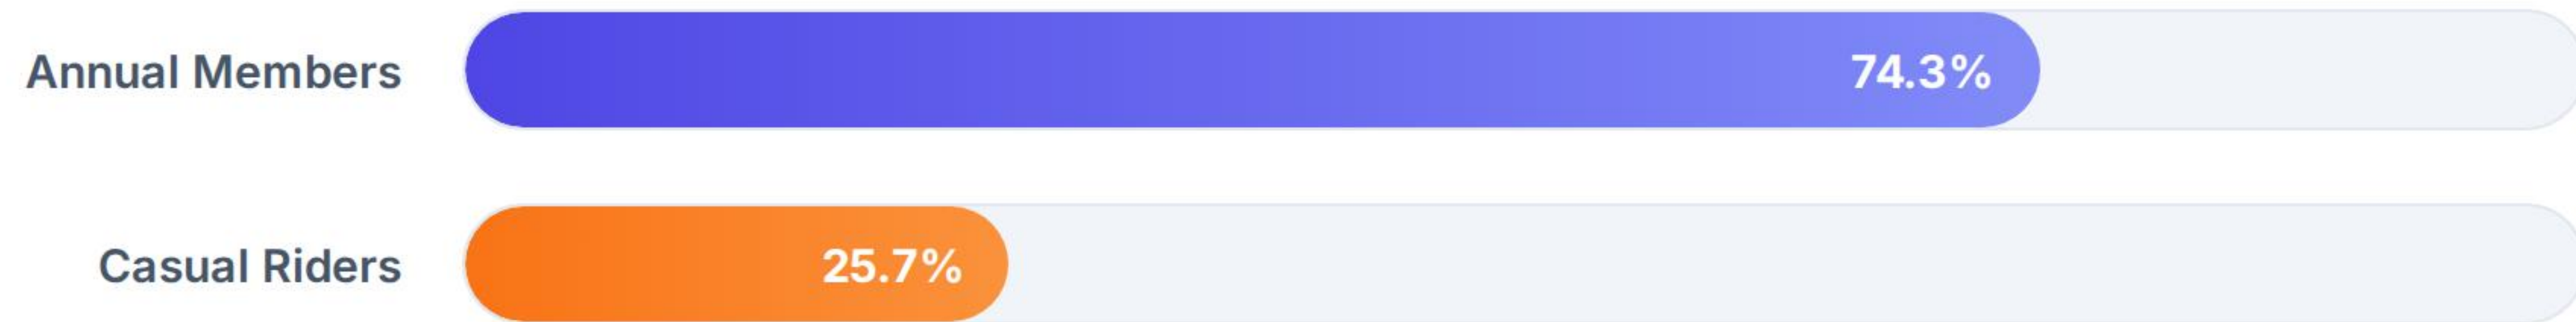

In contrast, commuter members peak on weekdays with an average of 135,000 daily rides, dropping off dramatically on weekends. Members also keep their rides short and consistent (avg. 11.33 min) compared to casual riders (avg. 16.04 min).

| Data Analysis Methodology

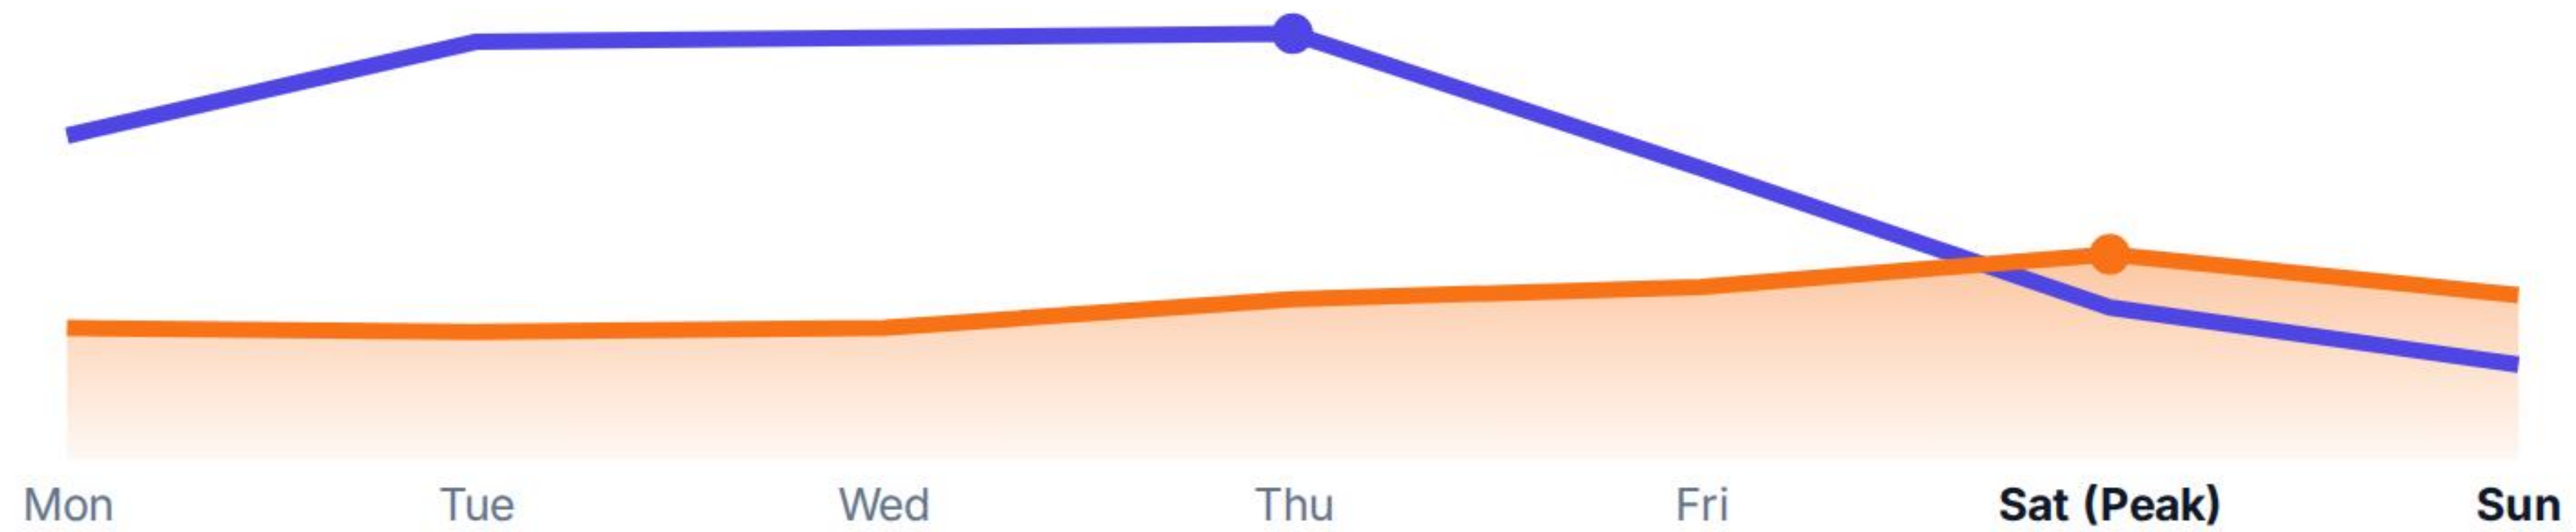

| Members Drive 74.3% of Volume

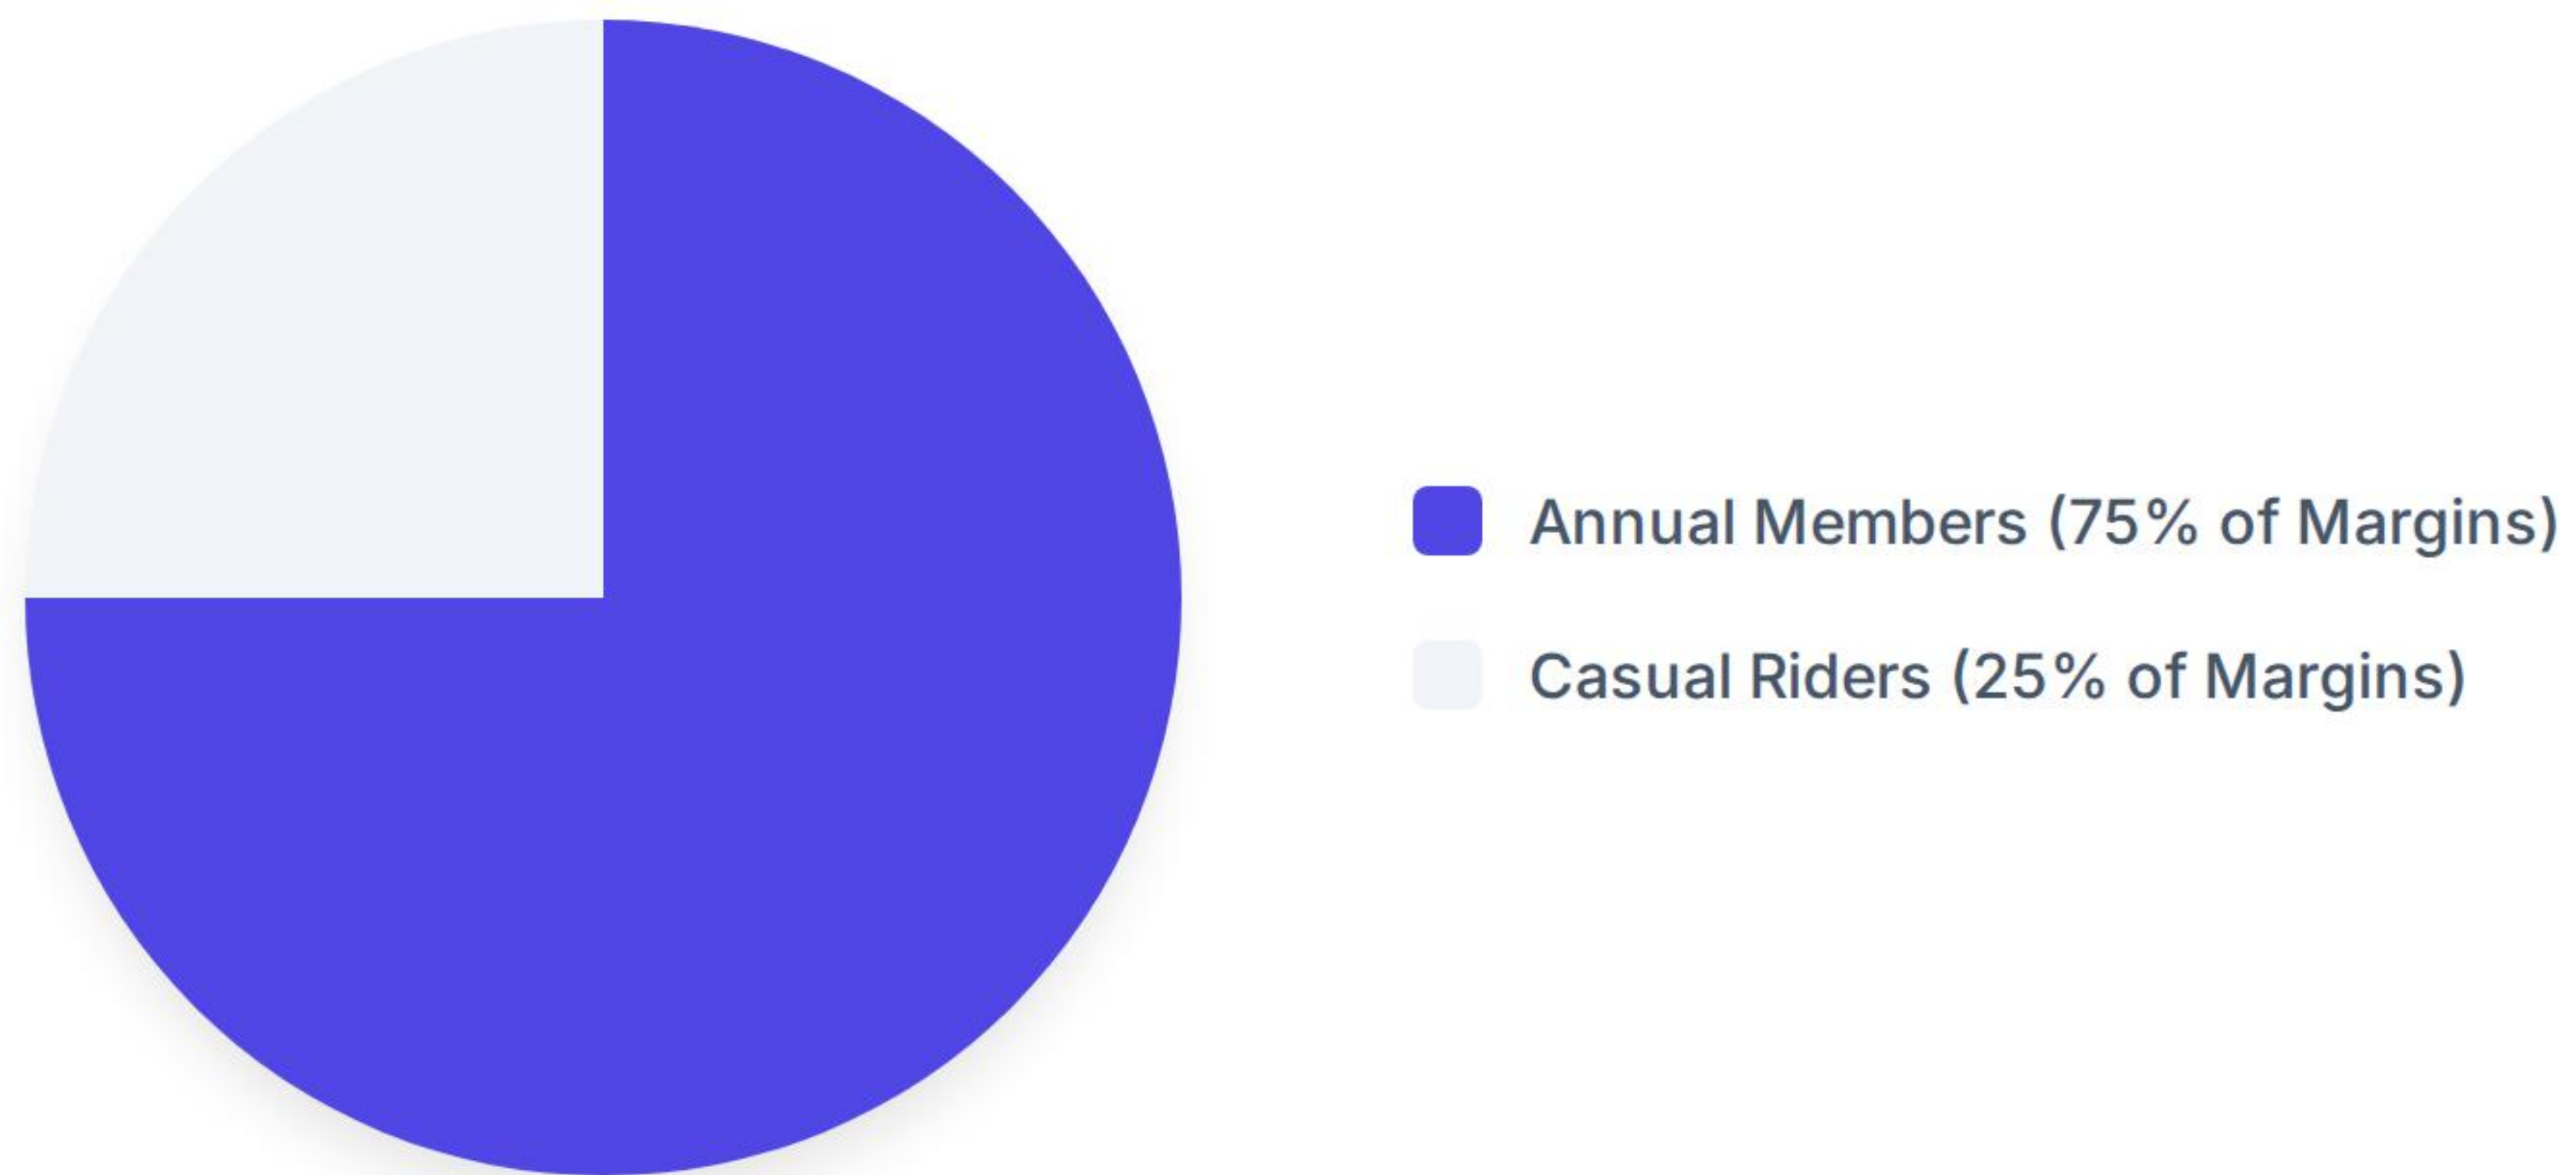

Out of 1,072,630 total clean rides in Q1 2026, members represent the absolute core of the business, but casual riders represent a massive potential conversion pool of 275,458 users.

Weekly Ridership Volume Trends

Casual rider volumes (orange line) peak on Saturdays, whereas member ride volumes (blue line) peak mid-week, proving the weekday commuting utility vs. weekend leisure split.

| The Value of Membership

Members provide highly predictable, high-margin revenue through recurrent subscription billing, representing 75% of total business operational profits.

| Key Analytical Findings

Longer Trips

Casual riders average 16.04 min per ride compared to only 11.33 min for members, pointing directly to tourist & recreational behavior.

Weekend Focus

Saturdays and Sundays represent peak casual demand, driving 35.5% of total weekend network trips.

Hotspots

Most casual rides concentrate around lakefront stations, parks, and major city tourist districts.

Actionable Conversion Plan

- 👉 **The "Weekend Warrior" Tier:** Launch a specialized weekend membership tier designed specifically for casual users who only ride on Saturdays and Sundays.
- 🎯 **Geo-Targeted Ads:** Deliver dynamic, in-app push offers at high-volume docks located near Lake Shore Drive and city parks on weekends.
- ✈️ **Cost-Savings Emails:** Trigger post-ride emails highlighting calculated cost savings.
"You spent \$12 on your ride. An annual member would have paid \$0."
- ★ **Seasonal Promos:** Capitalize on summer leisure volume surges by launching targeted 3-month trial memberships beginning in late spring.

Strategic Q&A Session

Thank you for your time and analytical review.
